

# ERP Management BPMN

**ERP** stands for **enterprise resource planning**, and it is a sort of software that businesses use to handle day-to-day operations like accounting, procurement, project management, risk management and compliance, and supply chain operations. Enterprise performance management software, which helps plan, budget, predict, and report on an organization's financial results, is included in a complete ERP suite. ERP systems connect a variety of company operations and allow data to move between them. ERP solutions avoid data duplication and ensure data integrity with a single source of truth by gathering an organization's shared transactional data from numerous sources.

A free customizable **ERP management BPMN** template is provided to download and print. Quickly get a head-start when creating your own BPMN diagram with **EdrawMax**. It can be used to illustrate the ERP management process, showing people clear steps across different functional departments.
