

ORGANIC VEGETABLES

MEANING

Pesticide residue after pesticide use in the production process is lower than the national or international standards. Say so, "green products" is relative, not absolute, and evaluation of "green products" also depends on other indexes, such as the production of "green products", soil and groundwater pollution to the environment, energy saving energy; "Green products" are safe and healthy in the process of use, which is harmless to the environment. "green products" also have no pollution to the environment and can be degraded rapidly in the process of dying.

BENEFIT

The raw material conforms to the green food ecological environment quality standard. Crop planting, livestock and poultry raising, aquaculture and food processing conform to the green food production operation rules.
